

## Report of Exposure to Blood or Other Potentially Infectious Materials

An exposure incident is defined by the OSHA Bloodborne Pathogen Standard (29 CFR 1910.1030) as a specific eye, mouth, other mucous membrane, non-intact skin, or parenteral (skin-piercing wound) contact with blood or other potentially infectious materials that results from the performance of an employee's duties. These materials include any body fluid containing visible blood, semen, vaginal secretions, fluids surrounding internal organs, unfixed human organs or tissues, and cultures containing HIV, HBV, or HCV.

Any employee so exposed must be referred to a healthcare professional for post-exposure care and counseling. Use this form and the Campus-wide Exposure Control Plan to ensure post-exposure follow-up and care. Please direct questions to the DRS at 217-333-2755.
